

## AcuBac Anti-Bacterial

### Hand Soap

**AcuBac** anti-bacterial liquid hand soap is very gentle on the skin and leaves a light, lingering, clean fragrance.

**AcuBac** anti-bacterial liquid hand soap contains the highest quality ingredients that leave the skin feeling soft and cool. It has a soothing hypo-allergenic on the skin and eyes and is safe for all skin types.

**AcuBac** anti-bacterial liquid hand soap will not cause dryness, irritation or inflammation of the skin.

**AcuBac** anti-bacterial liquid hand soap is environmentally friendly, biodegradable, and has been formulated in accordance with cosmetic grade anti-bacterial agents to sanitize the skin and provide additional bacterial and virus protection.

**AcuBac** anti-bacterial liquid hand soap is made of natural highest quality ingredients and is known as a top competitor in its category as far as performance and protection is concerned.

**AcuBac** anti-bacterial liquid hand soap is excellent for these functions:

- Cleaning food and soils from hands after food preparation
- Eliminating germs and bacteria and preventing cross contamination in the workplace
- For its ability to leave a lovely, moisturizing, soft cool skin touch
- Helping hands and body to rehydrate, leaving your skin feeling soft, moist, cool and rejuvenated
- It's safe for all skin types and won't cause dryness, cracking or inflammation

It is just as important to wash hands regularly as it is to sanitize with a good quality hand sanitizer like **AcuHand Sanitizer liquid** or **AcuGel Hand Sanitizer Gel**. Washing hands with **Acubac** anti-bacterial liquid hand soap regularly helps fight the bacteria as well as strips the protein layer from the skin surface to eradicate a layer for the viruses and bacteria to live and feed off of.

It is necessary to wash with cold or warm water as per the illustrations below rubbing your hands together with **Acubac** anti-bacterial liquid hand soap for at least 20-30 seconds before rinsing. Refrain from using a shared towel to dry your hands but to rather used either a hot air dryer or a disposable paper towel to prevent cross contamination.
